

Annette Groschke, Deutsche Kinemathek, Berlin

Session 1

Overcoming challenges of the 3-Level Hierarchy Model of En 15907 at Deutsche Kinemathek

Our goal since implementing EN 15907 was to use a 3-Level Hierarchy Model of the standard. Once we started entering information in our new Adlib database we encountered challenges when trying to record crossover data regarding the variants embodied on manifestations. Furthermore we had to decide on a solution for documenting compilations that would result in a clear and comprehensible structure. While trying to reach maximum usability we realized the restrictions of the 3-Level model. To overcome our challenges we consulted the FIAF cataloguing manual. Our presentation will summarize the three different approaches we tried and our final conclusion how to proceed in the future.
